

1st Announcement
15th International Ionospheric Effects Symposium
IES2017
9-11 May, 201
Alexandria, Virginia, USA

Bridging the gap between applications and research involving ionospheric and space weather disciplines

Dear IES Friends and Colleagues:

IES2017 is scheduled for May 9-11, 2017 in Alexandria, Virginia, an historic town near Washington DC. Ionospheric Effects Symposia have been held in Alexandria since 1975, and IES2017 is the fifteenth in the series. IES2017 offers an opportunity for scientists, engineers, and program managers to review current activities and solutions to system impacts of ionospheric phenomena and space weather events.

The call for papers and additional information for the meeting details will be provided early in 2017. For now we hope that you will mark your calendars and begin planning your submission to the meeting. In the meantime, we wish you all a happy and peaceful holiday season.

With best regards,

Keith Groves and Patricia Doherty
Institute for Scientific Research
Boston College
