

Message transmis par : Marianne Faurobert <marianne.faurobert@oca.eu>

Dear colleague,

I have announced a PhD position in Solar Physics at Stockholm University.

I would appreciate it the most if you could forward this information to any potential candidate or to master students that are close to finishing and that are looking for a PhD position.

As advertised in our webpage:

"We announce a PhD position to study the physics of active region and flares in the solar chromosphere. This project involves modelling of very high resolution spectropolarimetric observations acquired with the CRISP and CHROMIS instruments at the Swedish 1-m Solar Telescope (SST) and with NASA's IRIS satellite. The selected candidate will compute and analyze empirical 3D models from these observations using data inversion techniques."

More details about the position and the application form can be found here:
