

The next CESRA Workshop,  
CESRA2016: Solar radio physics from the chromosphere to near Earth  
will be held from 13-17 June, 2016, in Hotel Dupanloup, Orléans, France.

CESRA, the Community of European Solar Radio Astronomers, organizes triennial workshops on investigations of the solar atmosphere using radio and other observations. Although special emphasis is given to radio diagnostics, the workshop topics are of interest to a large community of solar physicists. The format of the workshop will combine plenary sessions and working group sessions with invited review talks on science topics and new instrumentation, oral contributions, and posters.

Since Orléans is expected to be quite busy in June, attendants of the workshop are invited to make early hotel reservations. Information on the venue, hotel reservations, and the preliminary programme including invited speakers can be found on the meeting web site:
