

First announcement for the workshop
" Synoptic Ground-based Solar Observations for Space-weather
<<https://meteospace.sciencesconf.org/>>" at Nice Oct. 19-20 2016

The workshop is being held to discuss and gather community input on science requirements, capabilities and instrumentation for ground-based solar observing instruments in the framework of space-weather studies and applications.

Key topics:

- A. Existing Ground-based solar observations for space-weather and long term synoptic programs
- B. New ground-based projects for space weather and synoptic programs
- C. Ground and space synergies for space-weather
- D. Discussions on the coordination of French facilities

For further information please visit the web site
